

## HTML Attributes

Attributes provide additional information about HTML elements.

They are always included in the start tag and are written as name="value".

Common HTML attributes:

1. href - Specifies the URL in <a> tags

Example: <a href="https://example.com">Visit Site</a>

2. src - Specifies the image source in <img> tags

Example: 

3. alt - Provides alternate text for images

Example: 

4. title - Displays tooltip text when hovered

Example: <p title="Hello!">Hover me</p>

5. style - Applies inline CSS styles

Example: <p style="color:blue;">Blue Text</p>

6. id - Assigns a unique identifier to an element

Example: <div id="header"></div>

7. class - Assigns one or more class names to an element

Example: <div class="main-content"></div>
